ABOUT

Backend engineer with 11+ years of experience building APIs and microservices with distributed architectures in cloud environments, across industries such as fintech and banking. My strongest area is the .NET/C# ecosystem, with a focus on asynchronous messaging (RabbitMQ, Azure Service Bus) and on scalable, secure, and maintainable solutions. I integrate AI tools into my workflow to speed up design and development without compromising code quality or control.

EXPERIENCE

Mobi724
01/2022 - PRESENT

.NET Software Engineer

- Develop and maintain .NET applications for banking integrations, points-based payment systems and loyalty programs, built on a microservices architecture with asynchronous messaging (RabbitMQ) on Azure.
- Built a payment processing microservice that receives and processes Visa card transactions in real time (Visa Offers Platform), using in-memory caching (Redis) to optimize response times.
- Manage SQL Server databases, Microsoft Azure services and Azure DevOps (CI/CD, Boards, Pull Requests).
- Integrate AI agents (Claude Code, GitHub Copilot, Cursor) into the development workflow, keeping human control and review over the generated code.

Siblings Software
07/2021 - 01/2022

Full Stack Software Engineer

- Developed and maintained a system used by merchants to charge and invoice their customers, working on the backend (ASP.NET, .NET Core and .NET Framework), the frontend and the data layer with SQL Server.
- Contributed to the full migration of the frontend from AngularJS to Angular 12.

Smartmation
06/2018 - 07/2021

.NET Software Engineer

- Developed the backend for the web application of an IoT platform for remote public street lighting management, used by customers to monitor, visualize and manage their streetlights on a map.
- Built a WinForms desktop application from scratch for the installation and pairing of streetlights in the field, integrated with MQTT brokers (Mosquitto) for communication with the IoT devices.
- Managed infrastructure on Azure and AWS, and containerized applications with Docker.

FPA Software
01/2017 - 06/2018

.NET Software Engineer

- Developed and maintained .NET Framework desktop applications with WinForms for the financial sector, used by banks and brokerage firms to manage trading desks and back office operations, including the creation of installers for their distribution.

Accenture
12/2014 - 01/2017

Full Stack Software Engineer

- Worked full stack on a financial and project management application used for cost tracking and invoicing, on the backend with C# and ASP.NET (MVC), on the frontend with AngularJS, jQuery, HTML5 and CSS3, and on the data layer with SQL Server.
- Applied Scrum methodology with task tracking in Jira and version control with Git.

SKILLS

Backend: C#, .NET 10, .NET 8, .NET Core, ASP.NET, Web API, Microservices, Entity Framework, WinForms, RabbitMQ, Git
Frontend: Angular, TypeScript, HTML5, CSS3
Databases: SQL Server, PostgreSQL, MongoDB, Redis
AI: Claude Code, OpenClaw, GitHub Copilot, Gemini, Cursor
Automation: n8n, Make
Cloud (**Azure**): Key Vault, SQL Instance, App Service, Entra ID, ACR, Virtual Machine, Azure Function, Container App, App Insights, API Management
Cloud (**AWS**): EC2, RDS, S3, VPC, SES, IAM
DevOps: CI/CD, Boards, Artifacts, Build/Release Pipelines, Git Repos

EDUCATION

Associate's Degree in Applied Computer Science 2009 - 2013
Universidad Tecnológica Nacional (UTN)

High School Diploma in Computer Science 2004 - 2008
Instituto Parroquial San Roque
GPA: 8.24 / 10

LANGUAGES

Spanish (Native)
English (Upper Intermediate / B2)
